

Lean Six Sigma Green Belt certification workshop.

**Green Belt certification
in five days
with a master coach.**

**A unique, intensive
learning experience in
problem-solving.**

Why do you need Green Belts?

A Green Belt knows how to fix operations that are slow, inflexible, defective, obscure, costly and risky.

All companies have these types of problems.

Our graduates learn not only Six Sigma but also Lean and Deming principles for excellence.

So, all companies benefit greatly from hiring or training employees as Green Belts.

This is a workshop, not just a class.

Experience a one-of-a-kind learning method.

Case-based teaching brings the most realistic experience possible to the classroom.

Integrates lecture, teamwork and personal work leading to near-100% certification rates.

Our instructor-coaches have worked in Lean Six Sigma programs with IBM, Samsung, Johnson & Johnson, PepsiCo, Shell, Empire-Today and ElKay.

Solve problems for good, quit fire-fighting.

Participants will learn:

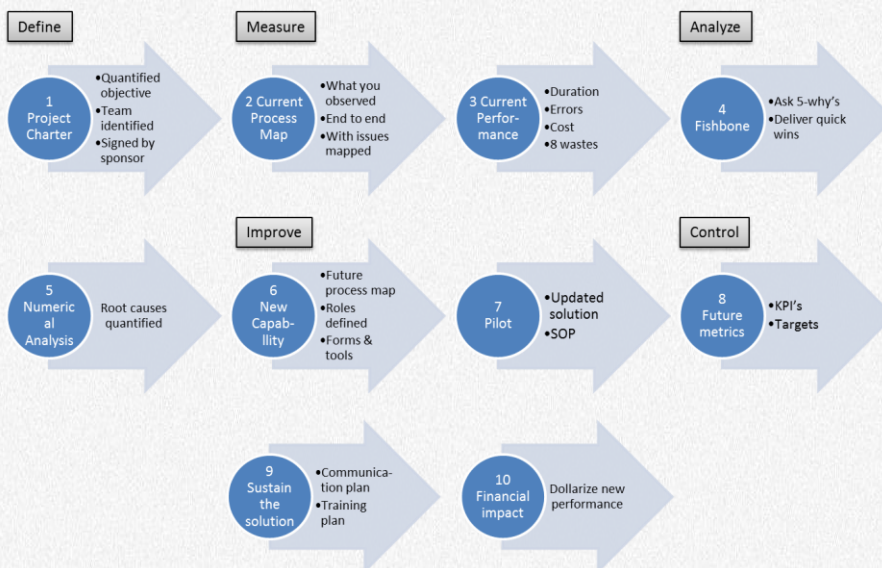

The Green Belt body of knowledge in a form that is immediately useful at work.

How to solve problems in teams and individually.

Project management, meeting facilitation and oral communication skills.

**fkiQuality-trained
Green Belts are competent
and confident problem-
solvers.**

LSS Green Belt Problem-solving Flow

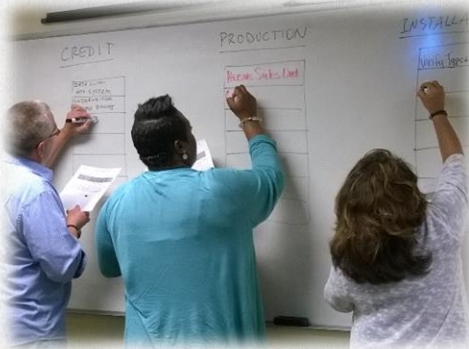

Participants experience what it takes to lead a Green Belt project.

Isn't this mostly for engineers and factory personnel?

Lean Six Sigma is for them and for any professional that must solve problems at work.

Executives, sales teams, customer service, nurses, accountants, educators and IT professionals use it already.

Course features:

- Covers entire Lean Six Sigma body of knowledge at the Green Belt level.
- Trains to certify – participants may earn the Lean Six Sigma Green Belt certificate granted by the Chicago Deming Association.
- Certification is earned through project work, not just by passing an exam.
- Instructors and coaches are certified Lean Six Sigma experts who enjoy teaching.
- Integrates Lean with Six Sigma, unlike most courses that simply add Lean sections to Six Sigma topics.
- Blends lectures with hands-on work to write to a 20-page individual project report.
- Leads to personal learning – each participant solves a unique problem in the company case (sales, finance, production, field service).
- Includes statistical and economical analyses of the model company's performance.

**APICS-
discounted
fee: only
\$1,995**

What past participants say:

I learned more than if I had completed a project on my own.

The workshop provides a path forward for more projects.

I am sure this will help me as a project manager.

I updated my LinkedIn as LSSGB!
